EDUCATION

- Bachelor of Science(3.10GPA) in Computer Science / Software Engineering, Higher Institute of Technology, Business and Management Sciences 2022–2023
- Higher National Diploma(2.87GPA) in Computer Science / Software Engineering, Higher Institute of Technology, Business and Management Sciences 2020–2022

SKILLS

- Languages - Java, JavaScript, Python, TypeScript
- Frontend - ReactJs, Typescript, NextJs
- Backend - Spring Boot, Spring AI, Node.js, REST API Design
- Data & Streaming - Apache Kafka, SQL
- DevOps & Cloud - Docker, AWS (EC2/S3), CI/CD, Git, GitHub
- Testing & QA - Postman, Unit Testing, Regression Testing, UAT, GitHub Issues
- Platforms & Tools - ServiceNow (ITSM), Linux
- Soft Skills - Agile/Scrum, Software Architecture, Technical Documentation, Team Collaboration

• AWAH • KENRIQUE ANYERE NGWA SOFTWARE ENGINEER

PROFILE

Results-driven Full-Stack Software Engineer with 5+ years of experience building scalable web applications using React, TypeScript, Java Spring Boot, and Node.js. Proven ability to design and deliver Kafka-based real-time data pipelines, RESTful APIs, and CI/CD-automated deployments. Hands-on experience with Docker, AWS, and QA engineering including end-to-end test planning and execution. ALX-trained with a strong foundation in clean code, software architecture, and agile collaboration. Seeking to contribute to a high-impact engineering team where performance and code quality matter.

WORK EXPERIENCE

Teacher

SEPTEMBER 2025 - PRESENT

Cambridge High School & Divine Favour High School - Computer Science & STEM Teacher

- Deliver Computer Science instruction to students from Form 1 through Upper Sixth, covering programming fundamentals, algorithms, software concepts, and ICT literacy aligned with the national curriculum.
- Teach High School Physics, Applied Mechanics, and Mathematics for Mechanics, translating complex technical concepts into accessible lessons for diverse student levels.
- Develop lesson plans, assessments, and practical exercises that bridge theoretical knowledge with real-world engineering and technology applications.
- Mentor students in problem-solving, logical thinking, and technical communication skills relevant to STEM career pathways.

Climate Wavers

JUNE 2024 - MARCH 2025

Quality Assurance

- Led end-to-end QA for a Django-based disaster management platform, covering core modules including real-time alerts, user reporting, and AI-powered dashboards.
- Designed and executed functional, regression, and UAT test plans; identified and logged 50+ critical bugs via Postman and GitHub Issues, contributing to a stable public launch.
- Built and maintained QA documentation covering test cases, release validations, and bug tracking workflows, enabling the team to demo successfully at the Talan Hackathon.
- Collaborated with developers to reproduce and resolve high-priority defects within sprint cycles, shortening the average bug-fix turnaround time.

ALX Africa

MAY 2023 - JANUARY 2024

ALX Software Engineering Program (1Year Training Period)

- Completed an intensive 12-month, project-based Software Engineering program covering full-stack development, algorithms, system design, and professional engineering practices.
- Built and deployed multiple real-world projects using React, Node.js, Python, and databases, applying skills in RESTful API design, authentication, and cloud deployment.
- Participated in peer code reviews and collaborative team projects, reinforcing agile workflows, clean code standards, and engineering communication skills.

LANGUAGES

- English (Native)
- French (Fluent)

CERTIFICATIONS

- QA Certificate of Excellence (2024) - Climate Wavers
- Full Stack Development (2023) - freeCodeCamp
- Backend Development and APIs (2023) - freeCodeCamp
- Frontend Development Libraries (2023) - freeCodeCamp
- Responsive Web Design (2023) - freeCodeCamp
- JavaScript Algorithms and Data Structures (2023) - freeCodeCamp
- Quality Assurance (2023) – freeCodeCamp
- Information Security and Quality Assurance (2023) - freeCodeCamp
- Data Analysis with Python (2023) - freeCodeCamp
- Data Visualization (2023) - freeCodeCamp
- Software Engineer (2025) - HackerRank
- REST API – Intermediate (2024) - HackerRank
- Problem Solving - Intermediate (2024) - HackerRank
- Java – Basic (2024) - HackerRank

Nasia Technology PLC

2020 - 2023

Software Engineer

- Designed and delivered full-stack web features using React, TypeScript, and Spring Boot, directly supporting product releases used by internal and external clients.
- Collaborated within an Agile team of designers, QA engineers, and product managers to ship bi-weekly releases, reducing time-to-deploy through improved CI/CD pipeline practices.
- Refactored legacy backend modules in Java, improving system response time and reducing reported bugs by an estimated 40% over six months.
- Maintained code quality across the team through Git pull request reviews, unit testing, and technical documentation aligned with best practices.

PROJECTS

Microservice E-Commerce Web Application - Java Spring Boot, Microservices Architecture

- Designed and built a distributed e-commerce platform using a microservices architecture, with independent services for product catalog, orders, payments, and user management.
- Implemented inter-service communication and API gateway routing, ensuring scalability and service isolation across the system.

Farmers Wallet Web Application - Java Spring Boot | [manage.kombe-farms.com](#) | [GitHub Repo](#)

- Developed and deployed a live financial management platform currently in active use by farmers, enabling wallet tracking, transactions, and farm resource management.
- Delivered a production-grade full-stack system with real users, demonstrating end-to-end ownership from development through deployment.

WSN - Wireless Sensor Network System - Java Spring Boot, IoT | [Frontend Repo](#) | [Backend Repo](#)

- Built a backend system to collect, process, and monitor data streams from wireless sensor nodes in real time.
- Designed data ingestion pipelines and dashboards for sensor readings, supporting IoT-based monitoring use cases.

Automated School Report Card System | .exe - Java Spring Boot | [GitHub Repo](#)

- Developed an offline automated system that generates student report cards from academic data inputs, eliminating manual processing for school administrators.
- Implemented report computation logic, student record management, and printable output generation.

CNERSH Web Application - Cameroon Government - Java Spring Boot | Public Use

- Engineered the web platform for the National Ethics Committee for Human Health Research (CNERSH), a government-facing application serving public and institutional users across Cameroon.
- Delivered a secure, scalable application handling research submissions, ethical review workflows, and public information access for a national health authority.

● **Kombe Farms Employee Management System (EMS-KBF) - Java Spring Boot, React/Next.js | [Backend Repo](#) | [Backend Repo](#)**

- Built a full-stack employee management system for Kombe Farms with a decoupled React/Next.js frontend and a Spring Boot REST API backend.
- Implemented core HR modules including employee records, role management, and administrative workflows across a clean, responsive UI.

● **Fish Feed Formulation Web Application - Java Spring Boot | [Github Repo](#) | [Pearson Method Frontend](#) | [Pearson Method Backend](#)**

- Developed a scientific feed calculation engine that generates precise ingredient formulations for fish farming based on target crude protein values, fish population, water temperature, and growth targets using the Pearson Method.
 - Automatically computes exact quantities (in kg) for 14 ingredients, including protein sources (Fish Meal, Blood Meal, Soya Beans), minerals, vitamins, and supplements to meet nutritional targets.
 - Models three fish growth stages (Juvenile → Sub-adult → Adult) with stage-specific feeding schedules, daily feed requirements, and feeding frequency recommendations.
 - Outputs a complete feeding plan covering total feed required, total days to target weight, and average daily consumption, enabling farmers to plan feed procurement accurately.
-
